# Introducing the New Spacesaver Range

The new Spacesaver range provides 'purpose-designed' products that solve storage challenges for business, governments, museums, libraries, archives and in the specific sectors of education, healthcare and justice.

## **Solving the Healthcare Storage Dilemma**

The team at Dexion is committed to delivering storage systems capable of solving the myriad of storage problems that healthcare facilities are experiencing today. From the most simplistic physician's office to the newest and most comprehensive state-of-the-art medical centre campus, we recognise that there is a wide range of unique storage needs, from records to central supplies, x-rays, pharmaceuticals, surgical and pathology supplies, to histology specimens, reference libraries and even dietary reserves. The Spacesaver range can accommodate such a variety of demands.

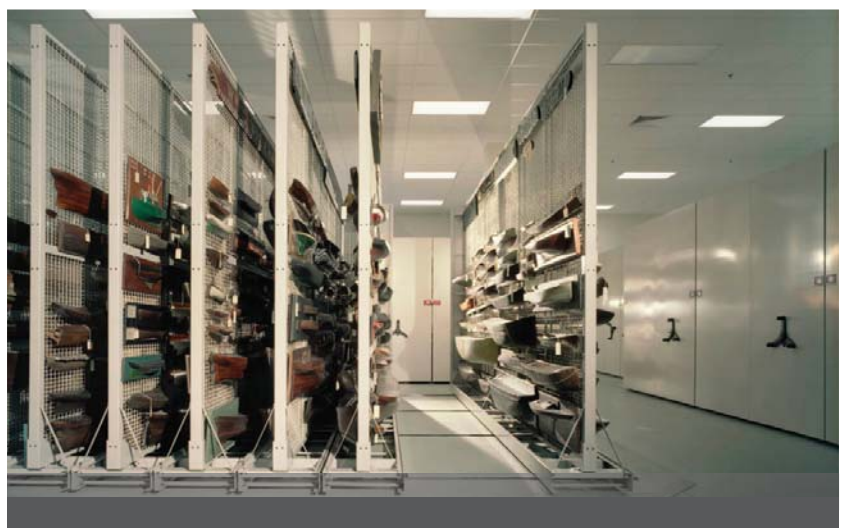

### **Solving the Library Space Dilemma**

The traditional definition of a library as a collection of books, or a building to house a collection of books has become obsolete. We have recognised that to preserve and protect the variety of media our libraries now house, and to ensure safe, convenient user access to the media collections, a specialized storage strategy must be developed. That is why the Spacesaver range includes products with the flexibility to accommodate virtually any type of filing system, cabinet or rack, and the development of numerous product innovations designed to provide user safety and enhance collection preservation.

### **Solving the Museum Space Dilemma**

The world is rapidly running out of useable internal museum storage floor space within the museum environment. To this end, we suggest a discipline called "Space Conservation." Very simply, it conserves all the floor space currently used by vacant non-productive rows and rows of aisles... aisles needed for access to materials stored on conventional fixed-in-place storage shelving. "Space Conservation" has been made possible only with the development of high-density mobile storage systems. Products from the Spacesaver range are recognized as leading the innovation race in high-density mobilised storage systems designed specifically for museums.

### **Solving the Overcrowding Dilemma in the Justice Sector**

Corrections and law enforcement agencies are facing unprecedented increases in arrests, convictions and inmate populations, putting a real squeeze on space for people and materials. We can provide real solutions to this space crunch. Our storage systems have helped numerous facilities to maximise existing space, while providing essential security for the items being stored – items such as records and files, pharmaceuticals, medical & dental supplies, radiology films/x-rays, linens & laundry, weapons, bulk food storage, tools, books, tapes & videos, evidence and personal effects.
