

# Latest Innovations from Dexion

## Ultima® Longspan Two-Tier

Dexion first launched Ultima® Longspan shelving in 2003. Based on European design, it has proved to be very popular with customers for hand-loaded applications. However following extensive market research it was decided there was also a market for a two-tier version of the system.

Ultima® Longspan Two-Tier enables customers to make the most of their available space. It's a strong, versatile and economical shelving system suitable for hand-loaded and non-palletised goods.

This product is ideal for a wide variety of applications, such as archives, factories, warehouses, retail and wholesale environments. It is particularly suited to the high density storage of small parts and the storage of large, heavy and bulky items.

The products most attractive feature is its ability to be readily customised to specific requirements, so customers can mix and match bay lengths and select from a range of accessories to best maximise capacity.

Seamus Redmond, National Engineering Manager, Dexion Logistics with SmartGuard.

## SmartGuard

Collisions between forklifts and racking is a relatively common occurrence in a busy warehouse. The best way to avoid forklift damage is to prevent it. Dexion's latest asset protection device SmartGuard, offers protection from every angle with the added benefit of being quick and easy to install, relocate and retro-fit.

Seamus Redmond, National Engineering Manager discusses SmartGuard's clever design and the benefits this product delivers to customers.

"There are no nuts and bolts with SmartGuard which makes installation easier, quicker and retro-fittable, and, because it's quicker, it's cheaper for the customer.

"It also means you can relocate them easily and it avoids what we term the 'direct bearing connection'.

"A direct bearing connection is a bolted connection between the protector and the item that it is supposed to protect, this features in products manufactured by our competitors.

"SmartGuard is attached to the rack system using clip and tongue technology, with a specially designed clip that absorbs the energy. It acts as a sacrificial component if required," said Redmond.

SmartGuard provides customers with a cost effective way to protect their racking structures from damage and promote safe operating practices within their facility.

Adapt Screen System.

### **Adapt and mySITE by Precision**

Precision is committed to making the concept of environmental sustainability a reality. With this in mind, the development of mySITE and Adapt was based around a focus on utilising materials that are of a sustainable nature. In addition, both products have been designed for ease of disassembly into base materials for recycling or refurbishment.

### **Adapt**

The Adapt screen system is an innovative solution for creating break out spaces, meeting areas, corridors and workstation partitions. The system is modular in design and provides a variety of height, width and panel configurations enabling users to change the work space when and how they wish. Open plan space can be divided and traffic flows controlled, whilst the open feel of the space is retained. The unique connection system has been designed to allow the user to re-configure without technical assistance and simply connects, two, three or four screens together at any angle from 90° to 180°. The screen is capable of accepting a wide range of panel types which can be removed and replaced or refurbished with ease.

### **mySITE**

The mySITE 'height-adjustable' workstation system offers a fresh look in design, functionality and performance, providing a complete solution for any office. mySITE workstations are designed to meet the needs of today's dynamic office and encourage communication and collaboration, between team members within an organisation. Fixed height, technician height adjustable and user height adjustable desking options, plus two desk shapes are available to best utilise available space. A sleek frame design offers each occupant increased leg room and a low profile foot ensures mobile cabinets can be easily placed under all areas of each work surface. With a full range of accessories to choose from, mySITE adapts to the working practice of each individual.
